Kindra Foster. May 22 / June 1 2001

Art is the technology of the soul. Art is the product of three philosophical disciplines: metaphysics; epistemology; ethics. Metaphysics and epistemology are the abstract base of ethics. Ethics is the applied science that defines a code of values to guide man's choices and actions – the choices and actions which determine the course of his life; ethics is the engineering that provides the principles and the blueprints. Art creates the final product, it builds the model.

Ayn Rand
